

IQ

Name: Mohamed Rashid
Gender: Male
Age: 16
Grade: 10th
Country: Kingdom of Bahrain

IQ level

IQ

Verbal Intelligence

77

Verbal Intelligence is a score derived from the administration of selected subtests designed to provide a measure of an individual's overall verbal intellectual abilities. The Verbal IQ score is a measure of acquired knowledge, verbal reasoning, and attention to verbal materials. It is contrasted with fluid intelligence as one of the two factors of general intelligence first proposed by Cattell (1971). Crystallized intelligence is conceptualized as the product of experience, both cultural and educational, in interaction with fluid intelligence.

Numerical Intelligence

65

Numerical Intelligence tests evaluate the person's understanding of mathematic principles in addition to their ability to their ability to solve problems that involve numbers. It also assesses person's ability to discern logical or numerical patterns. Numerical Intelligence questions are found on many different types of aptitude tests and can be categorized in a variety of different groups including multiplication, division, ratios, and number sequences.

Non-Verbal Intelligence

65

Nonverbal intelligence describes thinking skills and problem-solving abilities that do not fundamentally require verbal language production and comprehension. This type of intelligence involves manipulating or problem solving about visual information and may vary in the amount of internalized, abstract, or conceptual reasoning and motor skills that are required to complete a task. Nonverbal intelligence is often closely linked with the Performance IQ domain of intellectual ability tests that evaluates nonverbal abilities, a domain which is often viewed in comparison to the Verbal IQ domain.
